

Software Requirements Engineering Project

Work Report Template about the Decision-Making Process

1. How did your group make decisions in determining the scope of requirements sources?
2. How did your group make decisions in determining the questions asked to stakeholders during requirements elicitation?
3. How did your group make decisions in determining the approach(es) used to communicate with stakeholders during requirements elicitation?
4. How did your group make decisions in ensuring that the information is fully collected during each round of requirements elicitation?
5. How did your group make decisions in determining the validation approach(es) of requirements? (requirements validation process checks for different types of problems, such as omissions, inconsistencies, and ambiguities, to help ensure that proper quality standards are fulfilled.)
6. How did your group make decisions in deciding the requirements that need to be negotiated?
7. How did your group make decisions in determining the information that needs to be documented?
8. How did your group make decisions in prioritizing requirements?
9. How did your group make decisions in identifying relationships (dependencies, conflicts, and overlaps) between requirements?
10. How did your group make decisions in determining the approach(es) for solving requirements conflicts?
11. How did your group make decisions in trading-off among the conflicting requirements during requirements negotiation?
12. How did your group make decisions in validating requirements with stakeholders?
